

Eight-Port Stream Selector

- Sample multiple sites using one mini GC system, such as a MINICAMS*.
- Reliable design that has been in continuous use in government and contractor facilities for over ten years with no failures or repairs.
- Requires no maintenance for continuous, 24/7 operation.
- Seven-segment LED display clearly indicates which of eight separate ports is being sampled by the mini GC system.
- Very small footprint, approximately 4" x 8".
- Weighs only six pounds.
- Valve/fitting block is heated and temperature is thermostatically controlled, with temperature overrun protection.
- Much lower cost than stream selectors previously available.
- Model # SS8P-1000
